Validation Solutions

ValiCert and Baltimore Technologies provide highly efficient digital certificate validation.

Highlights

- Works with all major certificate authorities.
- Supports all major certificate validation protocols.
- Enables validation of all major application categories.
- Validation Authority enablement made simple through out-of-the-box validators or through the use of ValiCert Validator Toolkit.
- Validation Authority can be administered remotely from a standard Web browser.
- ValiCert Stateful Validation allows application-specific or context specific validation scenarios.
- ValiCert Instant Revocation provides ability to suspend certificates at the ValiCert VA.
- Identrus compliant solution.

Heralding a broad strategic partnership, trust solutions provider ValiCert has developed an optimized version of its Validation Authority™ for use with Baltimore Technologies UniCERT™, a leading public key infrastructure (PKI) system. The result promises to be a faster and more simple digital certificate validation as an integral part of a Baltimore PKI.

Baltimore UniCERT issues and manages digital identities and certificates. For enterprises engaging in serious e-Business, UniCERT offers ironclad confidentiality, authentication, integrity, and non-repudiation services. Integration of the ValiCert Validation Authority and UniCERT PKI will eliminate interoperability concerns and enhance system performance.

ValiCert provides highly trusted, vendor-neutral validation technologies and services. Under the terms of the new partnership, Baltimore will ship a customized and optimized version of the ValiCert Validation Authority to Baltimore's customers, allowing end users to validate digital credentials regardless of the issuing certificate authority. Baltimore's customers will now enjoy ValiCert's real-time, Validation Authority solutions without integration issues.

The ValiCert Validation Authority provides all the tools necessary to host a validation solution, including:

- ValiCert Enterprise VA: Robust fourth-generation VA server.
- ValiCert VA Publisher: Obtains revocation data from a certificate authority, or a directory server supporting LDAP, and transports it to the ValiCert VA.
- ValiCert Validator Suite: Quickly and easily incorporates validation functionality into existing applications, such as Web Servers, Email, and Web Browsers.
- ValiCert Service: Managed digital credential validation service outsourced to ValiCert Trust Services or a ValiCert affiliate.

Baltimore's UniCERT customers will now have all the benefits of ValiCert's validation technologies and services. And, this initiative merely represents the beginning of a broad strategic partnership. ValiCert and Baltimore Technologies will work together to continue to provide leading-edge, trusted, validation solutions.

About Baltimore Technologies

Baltimore Technologies develops and markets security products and services to enable companies to develop trusted, secure systems for e-business, the Internet and mobile commerce. Its products include a wide range of Public Key Infrastructure (PKI) products and services, access control and authorisation products, wireless e-security solutions, cryptographic toolkits, content security products (MIMEsweeper) security applications and hardware cryptographic devices. Baltimore's global professional services organization offers a wide variety of consulting, training and deployment support to its customers worldwide. Baltimore Technologies markets and sells its solutions worldwide directly and through the TrustedWorldTM partner program. Baltimore TrustedWorld includes many of the world's leading technology companies and a wide variety of global, regional and local business alliance partners.
