

Trinary

EDI WINDOWS™

Choose the ease-of-use and automated processing of our best-in-class EDI software for Windows NT™, UNIX™ and LINUX™

For over fifteen years, Trinary has provided the finest in electronic commerce software applications. **EDI WINDOWS™** is a powerful Translation and Mapping software designed to meet all of your EDI objectives. **EDI WINDOWS™** will allow you to fulfill customer and supplier requirements, initiate EDI with your trading partners, and maximize EDI to leverage a strategic advantage.

Convenient table-driven tools and excellent processing performance provide maximum EDI benefit with minimum effort.

In addition to exceptional processing power, **EDI WINDOWS™** operates in batch, event-driven, schedule-driven or callable modes. Rapid development of trading partner profiles, inbound and outbound data maps, subsets, and conditional mapping options provides speedy implementation of your EDI program application. Your EDI data integration is simplified through flexible, online data mapping.

EDI WINDOWS™ translates national as well as international standards and supports an unlimited number of standards versions and all the standard transaction sets.

EDI WINDOWS™ Key Features

- ANX capabilities
- Support for all common EDI standards
- Complete Trading Partner profile control
- Automatic part number cross referencing
- XML support through IFP
- Detailed reports
- Ability to map to and from application flat files
- VAN, Private Network and Internet support
- Easy scheduling of repeating tasks
