

WiMAX Business Models 2005-7

**How operators and vendors can make money from
802.16, and which ones will succeed**

TABLE OF CONTENTS

INTRODUCTION

1. THE TECHNOLOGY

2. SPECTRUM ISSUES

- Profile complexity

3. THE BROADBAND CONTEXT

- Past failures
- Can BWA work this time?
- Broadband growth

4. MOBILITY

5. ALTERNATIVES TO WIMAX

- Wi-Fi
- Mobile-Fi
- UMTS TDD
- Cellular technologies

6. THE WIMAX BUSINESS MODELS FOR OPERATORS

- Market size
- The markets
- The role for new operators
- The rural last mile—developed economy
- US government policy
- Likely providers
- Developing economies—urban
- Likely providers
- Developing economies—rural
- Urban services
- Likely providers
- A simple business outline

7. THE ECONOMICS OF WIMAX

- Base station costs
- CPE and installation costs
- Other costs
- Opex
- Revenues
- ROI
- DSL pricing

8. CASE STUDIES

- Canada
- South Korea
- China
- Enterprise: TowerStream
- VoIP: AirBand
- Unlicensed: Nextweb
- Mobile: Mexico
- Hotzone: Portland, Oregon
- Other examples, developing economies
- Other examples, developed economies
- Other examples, mobile

9. THE EQUIPMENT MAKERS

- Key chipmakers
- Base station makers
- Undecided players
- WiMAX Forum members

10. CONCLUSIONS

LIST OF DIAGRAMS AND TABLES

1. The 802.16 standards
2. Modulation schemes
3. Standards compared
4. Overcoming obstruction
5. Smart antenna types
6. Snapshot of spectrum
7. Spectrum for WiMAX
8. Frequency bands
9. BWA model weaknesses
10. Broadband applications
11. Broadband growth
12. Broadband penetration by country
13. New operators' broadband market share
14. Path to mobility

trendsmedia

15. Rate of laptop WiMAX growth
